

## Wastewater Treatment System Automation

### Case Study Details

GE Hitachi Nuclear fuel fabrication facility in Toronto is in operation since couple of decades. They were treating their wastewater manually to meet strict city discharge limits. They were looking to automate wastewater treatment system and approached H2Flow for solution.

H2Flow provided a complete automation solution complying stricter requirement for nuclear facilities with control panel, pumps, valves and all necessary chemical dosage equipment.

System is in operation since 2016 and performing well as per client satisfaction.
