

Rotary Screen System

Case Study Details

Maple Leaf Foods, a major Canadian food processing company, required a screening system to reduce solids and contaminants in their wastewater to help meet city sewer discharge limits in their effluent.

H2Flow provided a Parkson Rotoshear Rotary Screen unit to remove solids out of the wastewater stream rated up to 990 usgpm.

The engineering was by Conestoga-Rovers & Associates and the installation of the unit was performed during a weekend.
