

## Softener for Mining Wastewater System

### Case Study Details

New Gold operates a gold processing facility in northern Ontario and required a new softener to reduce hardness in the water from its clarifier. H2Flow supplied a softener package from Samco in Buffalo, NY.

The softener package is sized to handle 10.2 m<sup>3</sup>/hr and consists of an FRP softener vessel with 0.27 m<sup>3</sup> of cation resin, polyethylene brine tank, ejector and controls.

**Construction Date:** May 2019
