

Water Treatment Facility 75 L/min

Case Study Details

The Ministry of Natural Resources Normandale Fish Culture Station is located near Normandale in the County of Norfolk. This project was implemented to treat wastewater from fish tanks, producing drinking quality water.

H2FLOW EQUIPMENT INC. supplied a water treatment facility including two mechanical rectangular clarifiers, a VIQUA-TROJAN ultraviolet disinfection system and a VIQUA-TROJAN water softening system.

The plant has been operating effectively meeting the required effluent limits. The UV system is very compact and has a simple installation that is servicing an extremely small footprint. The softening system offers efficient removal of unwanted minerals with maximum flexibility due to a programmable microprocessor control valve.

Engineering Consultant: Cole Engineering Group Ltd.

Installation Contractor: Collective Contracting Corp.

Start-Up: 2010
